Decoland Aluminium Shadow Gap Profile

Elevate Your Interior with Aluminum Shadow Gap Profiles.

Aluminum shadow gap profiles are a modern, innovative solution designed to create a seamless shadow gap between walls and floors, adding an air of elegance and sophistication to any room. These profiles are used for flooring applications to produce a “floating wall” effect. The result is a clean, uninterrupted look that enhances both traditional and contemporary interiors.

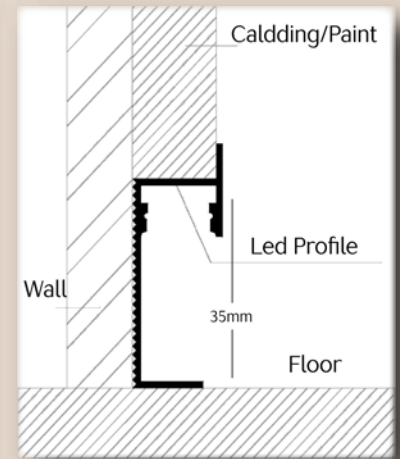

PHYSICAL DATA

Height	:	35 mm
Thickness	:	2 mm
Length	:	3000 mm

* In favor of product improvements, producer may change specifications without prior notice.

Features and benefits

- Enhanced interior aesthetics,
- Easy and precise installation,
- Versatile application (ceilings/floors),
- Maintenance-free.

Material

The profiles are made of pure aluminium which offers good stability values and it especially suits as a construction material for high surface requirements. The profiles are coated with variety of colors according to customer preference (white, black, beige, gray).

Installation Guidelines

The base should be prepared by creating a recess a gap in height equal to the skirting value plus the shadow gap depth. A recess of at a height of 3.2 cm from the ceramic level, with an inward depth of 1.5 cm. This space can be used to install an LED strip (optional). The profile is “glued” in place using a bonding adhesive paste for thin bed fixing.

Skirting boards

This profile can be mounted above a skirting board if desired, but its primary design is for installation without skirting.
